

The Digital Continuity Framework

What is a framework?

A framework is a catalogue of suppliers, pre-approved to offer the specified tools and services with pre-negotiated prices and conditions. Using a framework means that public sector organisations can contract their services knowing that EU tender obligations have been fulfilled. This saves time and money.

Information management services

Use to help you find and understand your information: for example to audit what information you have, better organise file plans, understand information risks, develop retention schedules.

Data storage consultancy

Use to help you to find and open your information: for example to reduce the amount you store (making it easier to find what's of value), ensuring that availability, back up, business continuity and disaster recovery meet business needs, ensuring appropriate selection of media to support digital continuity.

Data conversion and migration services

Use to help you open and work with your information: for example ensuring it doesn't remain in obsolete systems and formats. Services cover documents, audio and diagrams, emails, collaboration and EDRMS.

eDiscovery solutions

Use to help you find and understand your information: for example to find information, identify related information, prevent loss of continuity caused by access controls, provide proper audit trails.

The Digital Continuity Framework is part of the Digital Continuity Service. It is available from nationalarchives.gov.uk/dc-framework.

Are we still managing
our digital files as if
they were paper?

digital information **matters**

Data quality solutions

Use to help you trust and work with your information: for example by improving the quality of degraded data or records that haven't been updated.

Digital archiving solutions

Use to help you trust, find and open your information: for example by ensuring an appropriate record of provenance data, ensuring the integrity of archived information or enabling easy discover and retrieval of it.

Framework guidance

A Customer Guide to the Digital Continuity Framework is available on our website.
